

MR Combination

Combining, aligning and displaying whole-body diffusion images with a single click

Load multiple MR data series at different position and MR Combination merges them into a single image that can be saved as a new series. This protocol can automatically adjust the window and level of the various studies for review and saving.

Key features:

- Automatic registration of multiple data sets
- Automatically adjusts Window and Levels for optimal viewing
- MIP images are generated after combining images
- Multiple layouts for image review are available
- Easy-to-use workflow steps through the merging process
